

Recycling is more important than ever before to individuals and to cities such as Princeton. There is a pressing need to preserve our environment, save natural resources, reduce the amount of garbage going to landfills, and make recycling easy.

Premier started offering curbside collection of organic source separated materials to Princeton residents in June of 2011 as a “pilot program”. During the 3 month pilot we diverted 25.14 tons of organic material away from the local landfill equaling 31 carbon offsets or 5 Vehicles taken off the road and the equivalent of 91 trees planted. Furthermore, from June to December 2011 almost 60 tons of organics were collected and money saved from the diversion of this material away from landfills equaled almost \$7500. These figures represent a small portion of the 7000 + single family homes within the borough and township of Princeton as only 250 residents were participating during the period mentioned above. The impact could be much greater if more people join our organics program and help put Princeton on the map as a true sustainability leader in New Jersey.

Collection is done via a 32 gallon toter which we supply.
